MultiCom for LabVIEW™ Now Available in PXI/cPCI

MultiCom Price Reductions Announced

Viewpoint Systems, Inc. announces the addition of the PXI/CompactPCI (cPCI) version of its MultiCom for LabVIEW product. PXI/cPCI is the popular standard for high performance rugged industrial environments. PXI adds additional clocking and control signals to allow for synchronizing multiple cards. Both PXI and cPCI utilize a more rugged form factor, allowing for a secure connection to the PXI/cPCI chassis that will not be sensitive to vibration and/or shock.

MultiCom is an intelligent high port count serial interface that allows users to communicate with up to 64 serial ports. It consists of a PCI or PXI/cPCI card and a multiport serial connector panel, together with a library of custom LabVIEW VIs that enable the user to access from 8 to 64 (or more) serial ports.

Viewpoint also announces the price reduction of the existing PCI version of MultiCom. All versions with PCI bus interfaces have been reduced by \$100, which brings pricing as low as \$899 for an 8 port system.

Pricing for the PXI/cPCI version starts at \$1,395.

Call us or log onto our website at www.ViewpointUSA.com/products for additional pricing and configuration option details.
